

I just retrofitted by 01 A4 1.8T with L.A.T.C.H system. Here are some photographs. Hope this helps somebody.

Removing Rear Seats

1. Push front seats as far towards front as possible to give you some space to work with
2. Remove head rest from driver side of rear seat
3. Fold down 1/3 portion of split rear seats (driver side)

4. Look in between and you will see a star bolt, remove it completely

5. Pull the metal strip underneath the bolt upwards and then towards front at the arrow to remove it completely.

6. Now you can remove both the seats one at a time by pushing towards center and up.

7. Now you can see holes.

8. This after installing both sides.

9. All Done. Totally hidden

Audi stealership quoted \$150 + parts to do this. It cost me \$22 and change with parts and shipping + 15-20 minutes out of my weekend.
